Maya's Shopping Adventure

Learn about smart spending through Maya's story

Meet Maya

She has \$20 to spend at the store

Maya walked into the colorful toy store with her \$20 allowance money. Her eyes sparkled as she saw all the amazing toys around her!

First, she spotted a shiny new video game for \$25. "Oh wow!" she thought, but then remembered her mom's advice about budgeting.

Maya realized the video game cost more than her \$20, so she kept looking. She found three things she really wanted:

Puzzle Game
\$8

Art Set
\$12

Story Book
\$5

Maya did some quick math in her head. If she bought all three items, it would cost $\$8 + \$12 + \$5 = \25 . That was \$5 more than she had!

She remembered learning about needs vs wants. Maya thought carefully about which items would make her happiest and which ones she could save up for later.

After thinking it through, Maya decided to buy the puzzle game and the story book for \$13 total. This left her with \$7 to save for something special next time!

Maya's Smart Choice!

She stayed within her budget and still got two things she wanted. Plus, she saved money for the future!

Question 3 of 5

2 Correct!

Quiz Challenge!

Choose the best answer

Maya has \$15 and wants to buy a toy that costs \$18. What should she do?

- A** Ask her parents for more money right away
- B** Save more money until she has enough to buy it
- C** Buy the toy anyway and worry about the money later
- D** Look for a similar toy that costs \$15 or less
